

# RESILIENT & HEALTHY COMMUNITY

**THURSDAY FEB 24**

VIRTUAL FORUM SERIES

<https://publicinput.com/D4281>

# Forum Objectives

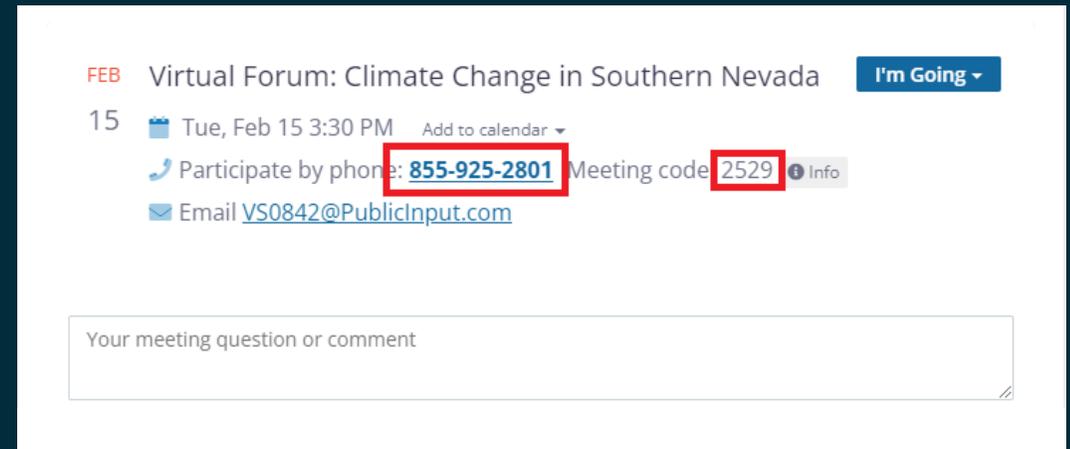

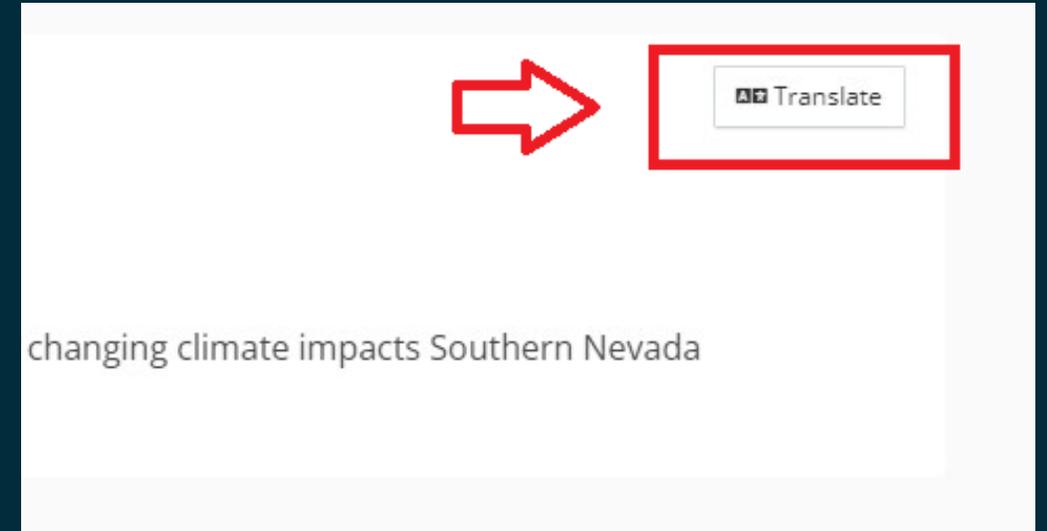

- **Review** how climate change is related to public health
- **Describe** the types of actions we can take to prepare for extreme weather events
- **Discuss** ideas and considerations to achieve actions in this focus area

# How to Use Public Input

- **Call in** to hear audio and leave voicemail comments
- **Type** comments into the chat
- **Translate** the page and meeting audio

# All-In Clark County

Address climate change and create a more sustainable future.

A smart, bold, inclusive approach to ensuring the well-being and prosperity of all, today and for future generations.

Led by **Department of Environment and Sustainability**

*Samantha Baker*

*Sustainability Program Administrator*

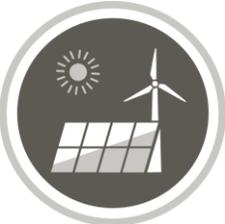

# Quick Poll

# CLIMATE CHANGE & PUBLIC HEALTH

**CHANGING  
CLIMATE  
CONDITIONS:**

**WHICH LEAD  
TO CLIMATE  
HAZARDS:**

**RESULT IN THE  
FOLLOWING DIRECT  
AND INDIRECT IMPACTS:**

**Temperature**

**Heat Waves**

**Precipitation**

**Intense Storms  
Flooding  
Drought**

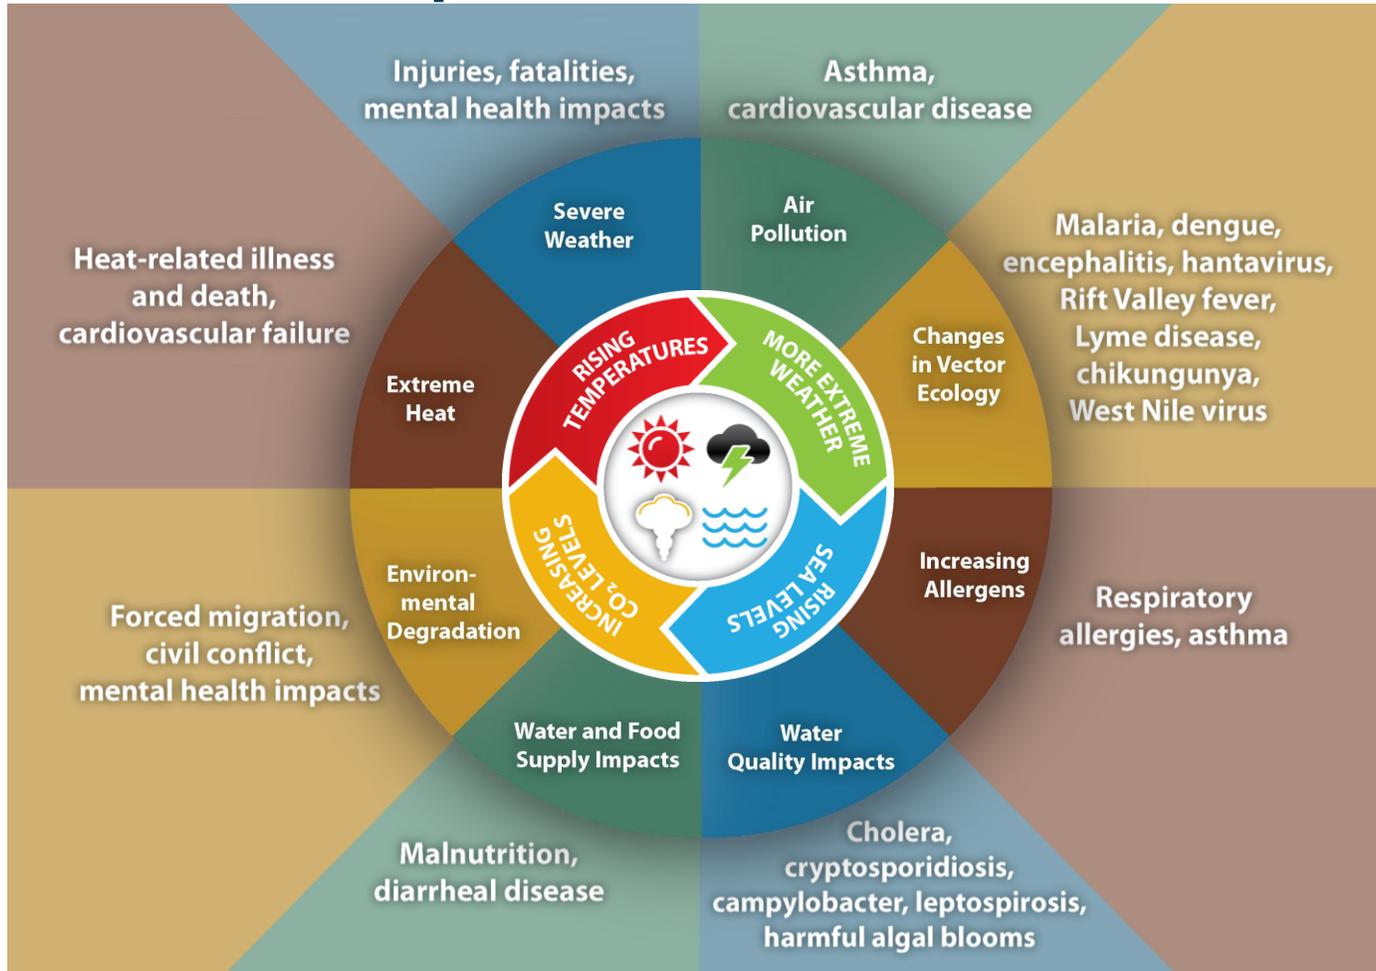

- Heat related illness
- Poor air quality
- Higher energy demands
- Pavement buckling

- Wildfires
- Smoke

- Infrastructure damage
- Blocked roadways
- Power outages
- Water shortages
- Crop/habitat damage

# Climate Impacts on Human Health

# Extreme Heat: By the Numbers

#1

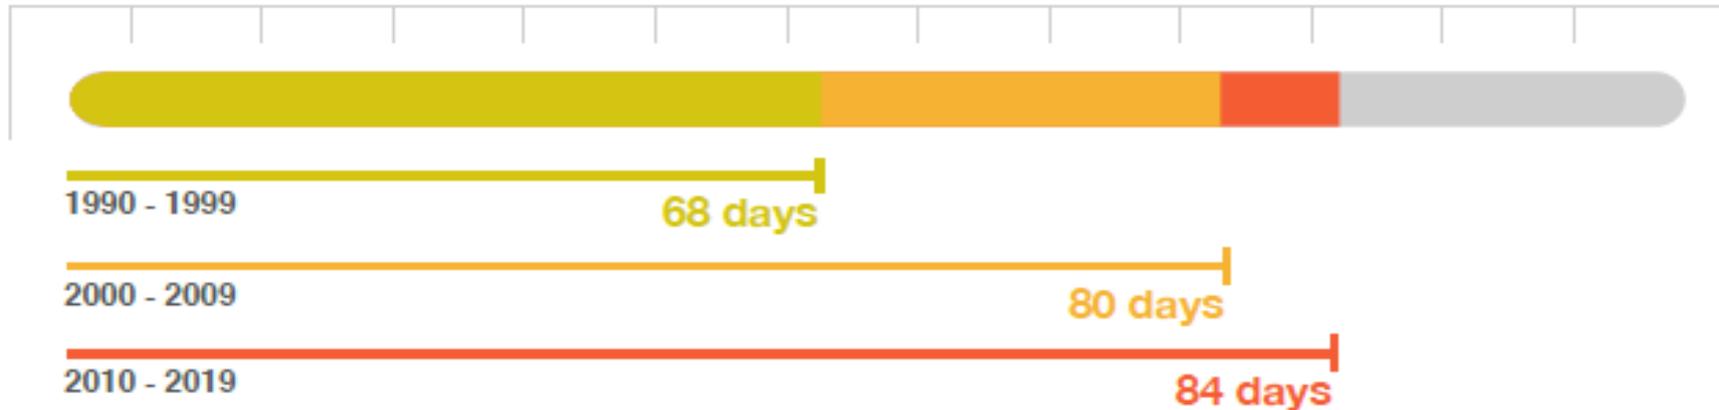

Extreme heat is the #1 leading cause of death among extreme weather events

568

heat-related deaths in Southern Nevada between 2009 and 2018

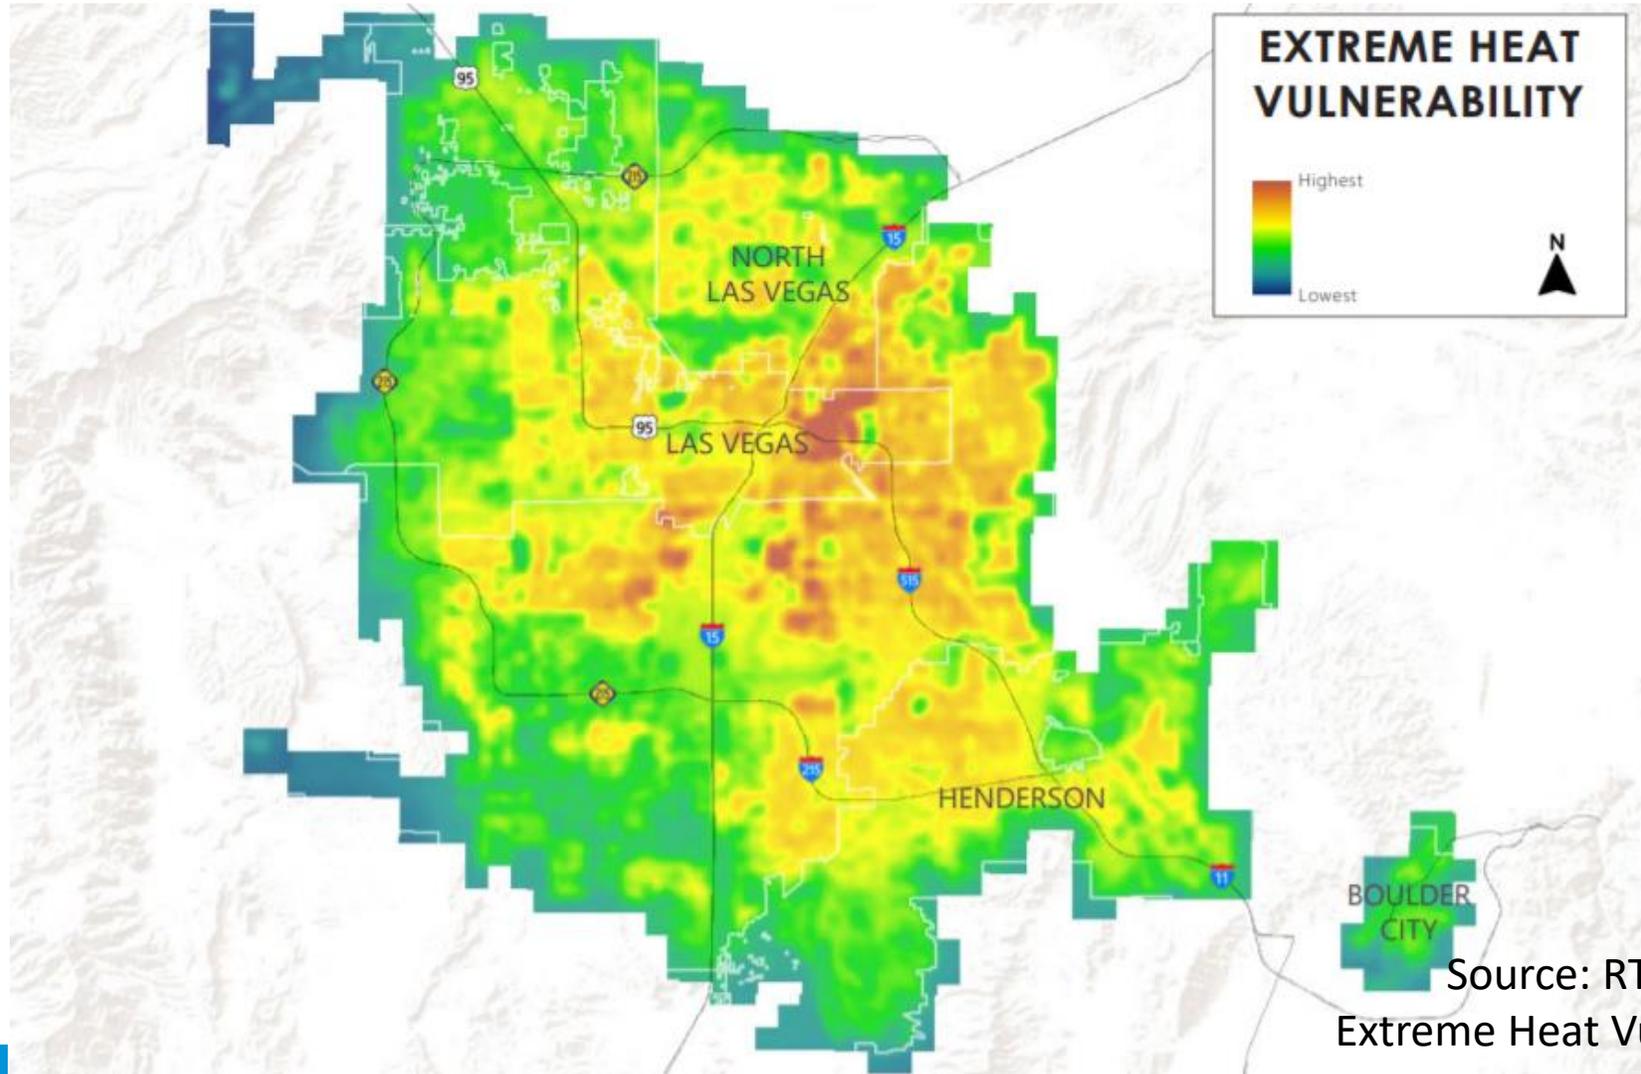

July 2021 was the hottest month on record, a record broken every July for the past 7 years

Average Number of Days Exceeding 100°F

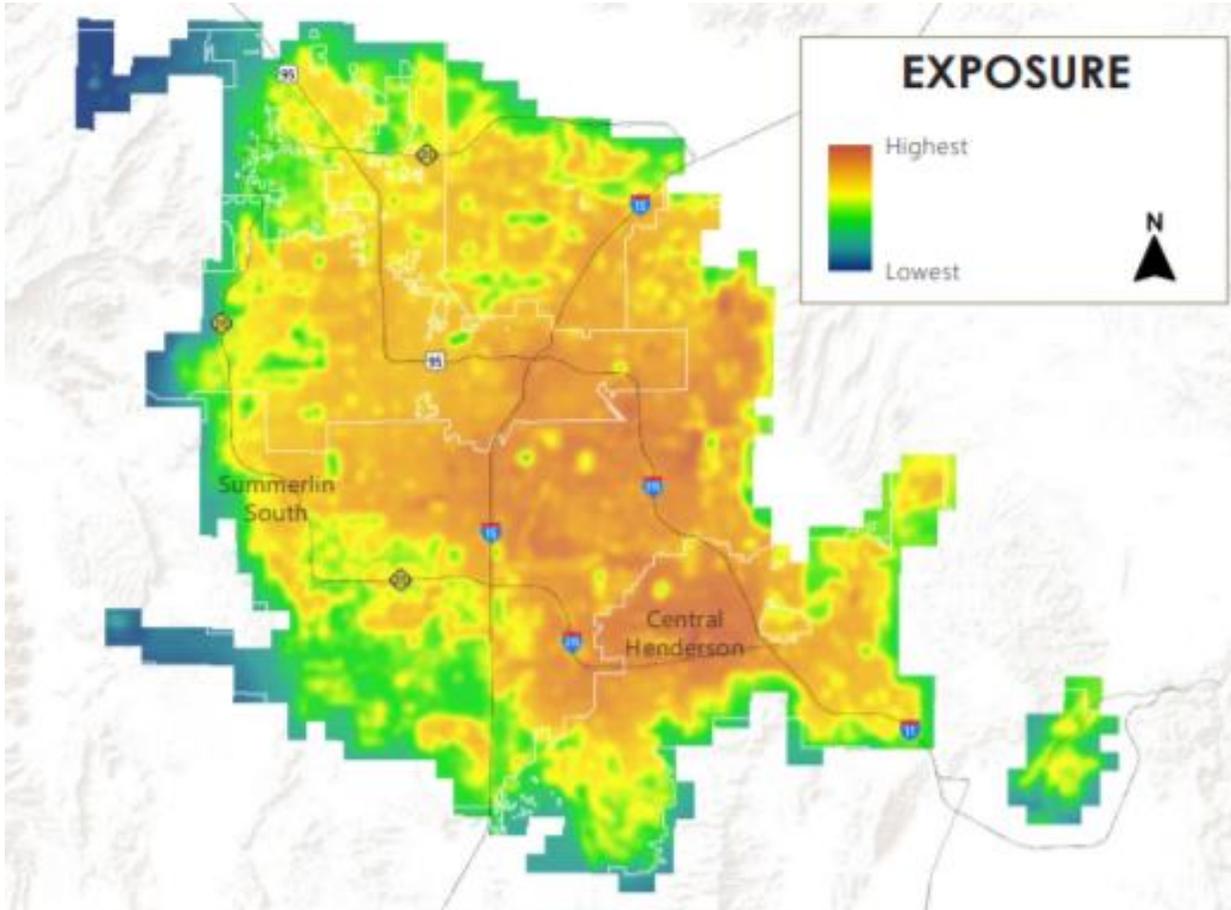

# Extreme Heat Vulnerability Map

# What factors contribute to heat vulnerability?

**Level of exposure** may be influenced by:

**Built  
Environment**

**Natural Environment**

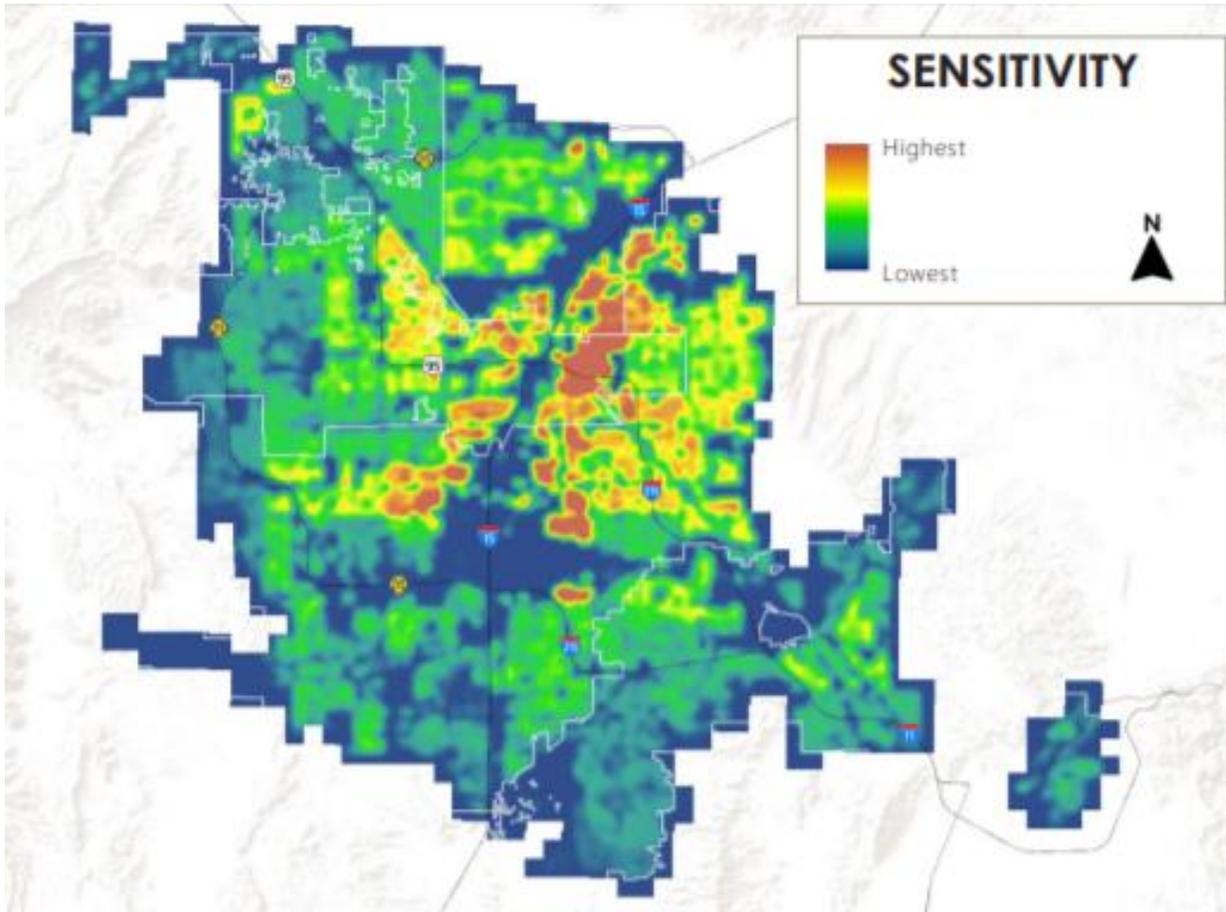

**Elevation**

Source: RTC Southern Nevada Extreme Heat Vulnerability Analysis

# What factors contribute to heat vulnerability?

**Sensitivity to heat** may be influenced by:

**Health  
conditions**

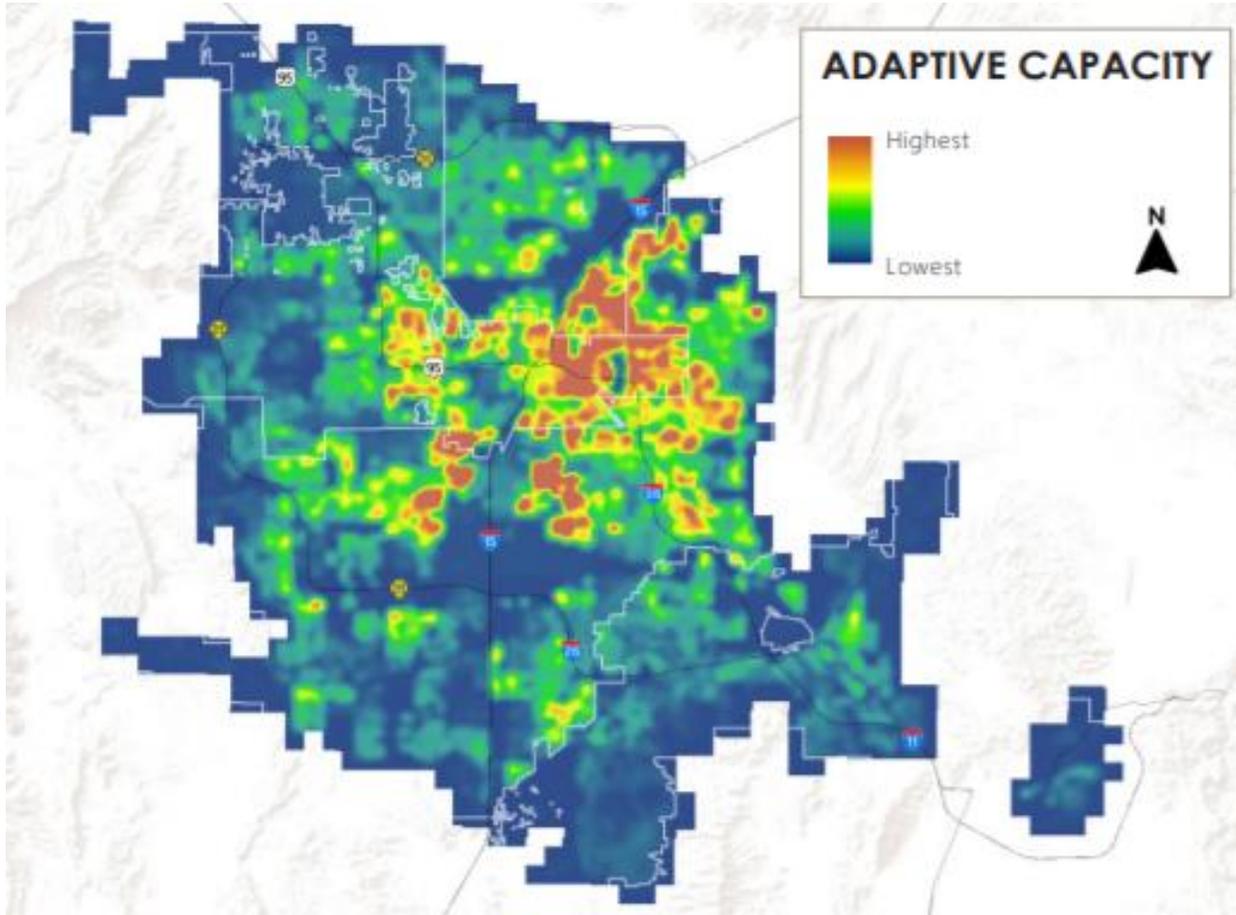

**Demographic factors**

Source: RTC Southern Nevada Extreme Heat Vulnerability Analysis

# What factors contribute to heat vulnerability?

Capacity to adapt may be influenced by:

**Economic  
resources**

**Social resources**

Source: RTC Southern Nevada Extreme Heat  
Vulnerability Analysis

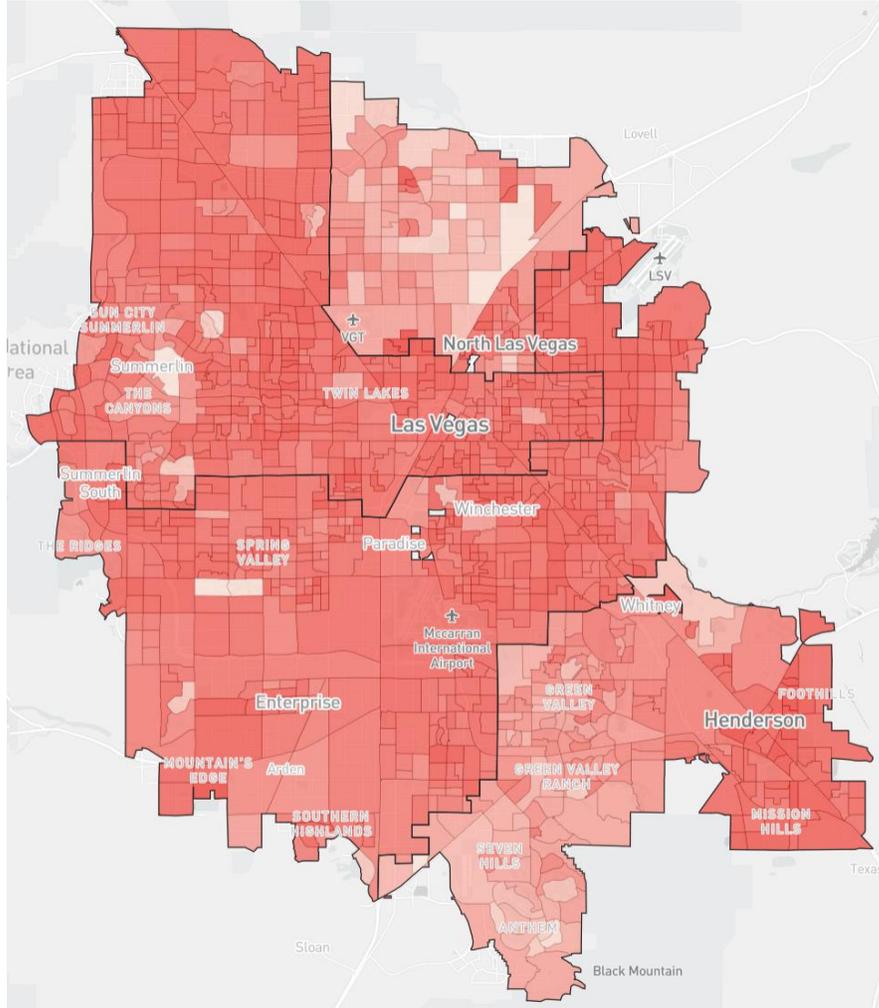

# Extreme Heat: What it Means for Clark County

- Heat-induced illness or death, particularly for those with pre-existing health conditions and for frontline community members
- Increased health and safety risk for outdoor workers (construction, landscaping, delivery)
  - Need to shift or cut back hours, provide additional resources to ensure safety
- Increased health and safety risk for people experiencing homelessness
  - Need additional programs and resources to appropriately support these populations
- Increased demand for cooling/energy
  - Worsened impacts for people without access to cooling

# Natural Resources and Temperature

2-6%

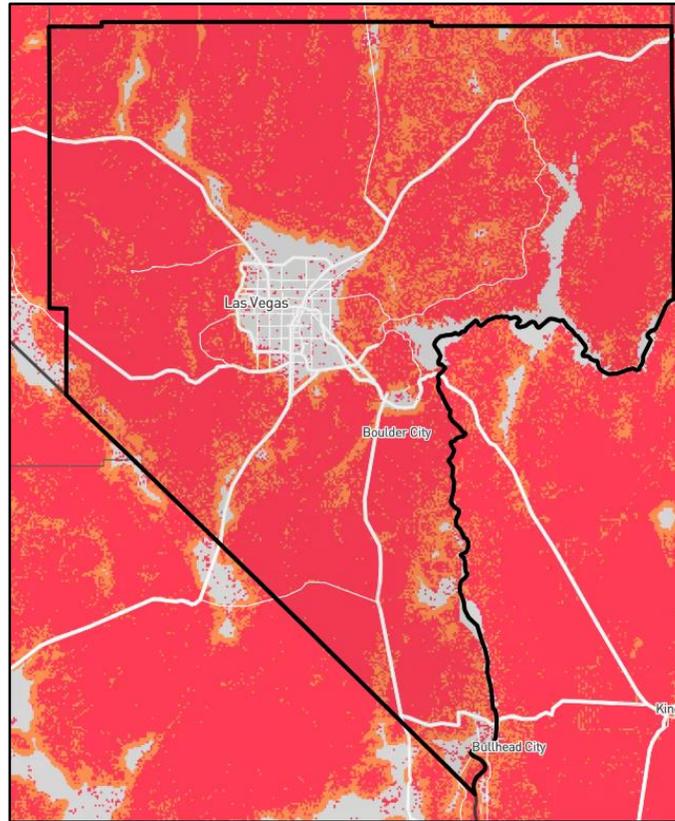

tree coverage in areas recording high urban heat compared to **10-20%** in neighborhoods recording lower temperatures

Source: American Forests Tree Equity Score

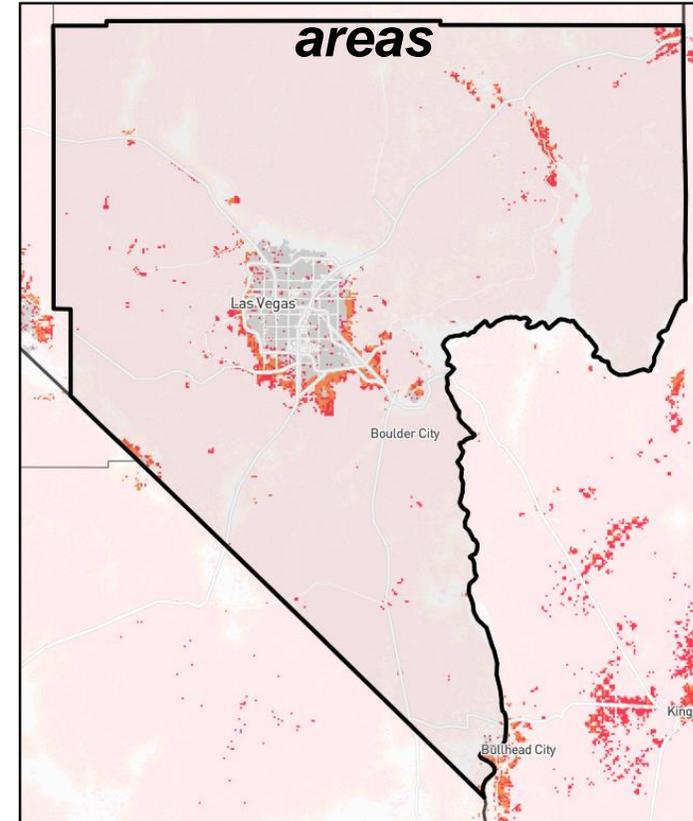

# Wildfire Exposure in Clark County

*Exposure of land area*

*Exposure of populated areas*

■ Directly exposed ■ Indirectly exposed ■ Not exposed

Source: USDA, USFS

# Regional Wildfires are Increasing

*Thousands Evacuate as Wildfires Ravage Utah and Northern California*

Nevada records worst air quality on record as wildfire smoke spreads

California's largest wildfire of 2022 grows uncontained to 1,800 acres near Bishop

NATION

**California wildfire near airport burns over 4,000 acres, officials say; 20%**

WEATHER

Firefighters clean up after a wildfire that threatened California's Laguna Beach

**Wildfire smoke blankets northern Utah, darkens sky**

# Wildfires and Air Quality

- Wildfires throughout the West create smoke/poor air quality that may significantly impact residents and visitors:
  - Impacts to human health, particularly for those with existing respiratory conditions
  - Increased costs/resources to address health impacts
  - Economic losses (reductions in viable working hours, decreased tourism to the region)

# Wildfire and Air Quality: By the Numbers

Climate change is **increasing the size, intensity, and duration** of regional and local wildfires

9%

of populated areas are directly exposed to local wildfires

26

days of unhealthy air quality in Clark County in 2020

19%

of populated areas are indirectly exposed to local wildfires

# Testing Your Knowledge

**WHAT IS *ALL-IN*?**

### Regional Greenhouse Gas Emissions Inventory

To assess regional sources of greenhouse gas (GHG) emissions contributing to climate change.

### Climate Vulnerability Assessment

To confirm climate hazards and the areas and systems most vulnerable to these hazards and identify solutions to enhance our community's overall resilience.

### Community Sustainability & Climate Action Plan

To grow climate literacy in the community and work together to develop a plan of action to ensure a sustainable and resilient future for all.

# Definitions

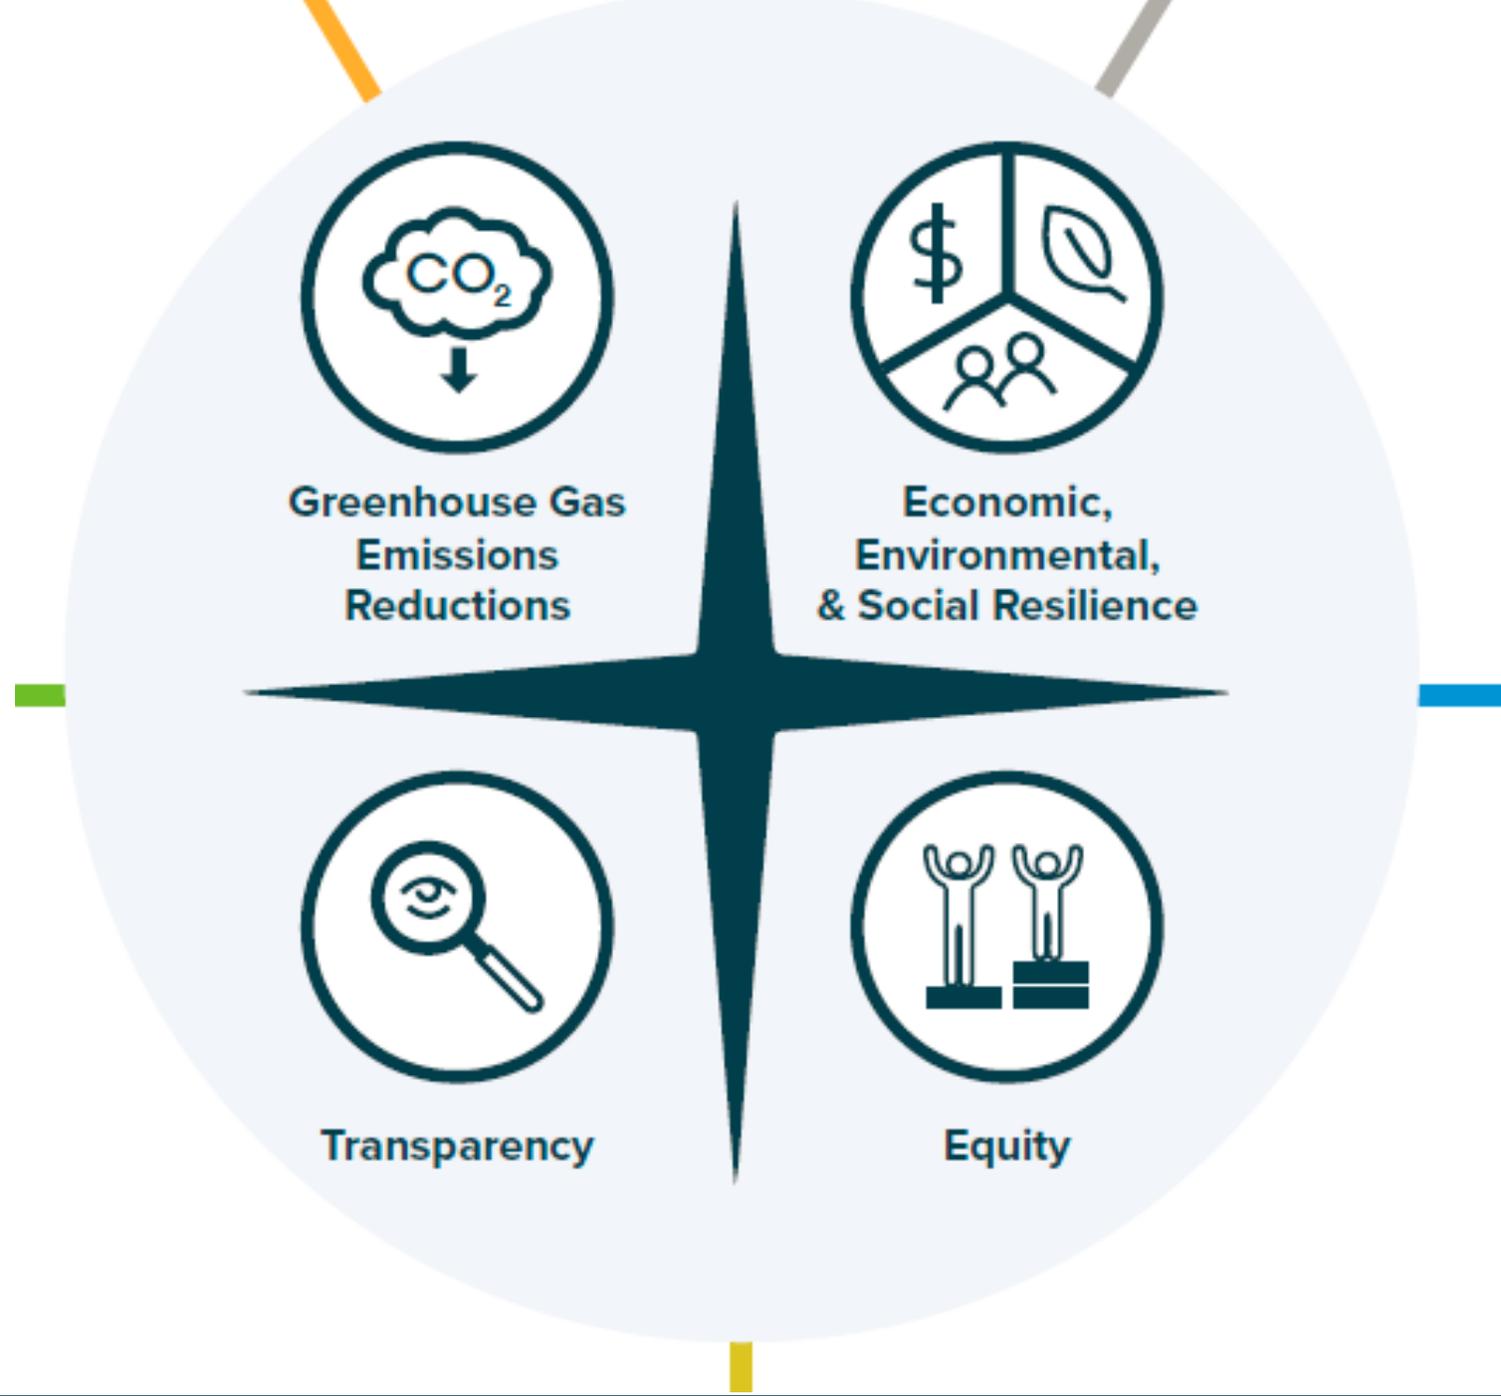

A ***sustainable*** Clark County balances resource efficiency, social well-being, and environmental stewardship while equitably meeting the needs of a growing community and thriving economy.

A ***resilient*** Clark County supports residents, businesses, and visitors to be healthy, successful, and adaptable to changing climate conditions.

# Guiding Principles

Foundation for evaluating goals and actions across the *All-In Initiative*

# Six Key Areas

**Clean & Reliable  
Energy**

**Connected &  
Equitable Mobility**

**Diverse &  
Circular Economy**

**Sustainable  
Water Systems**

**Resilient & Healthy  
Community**

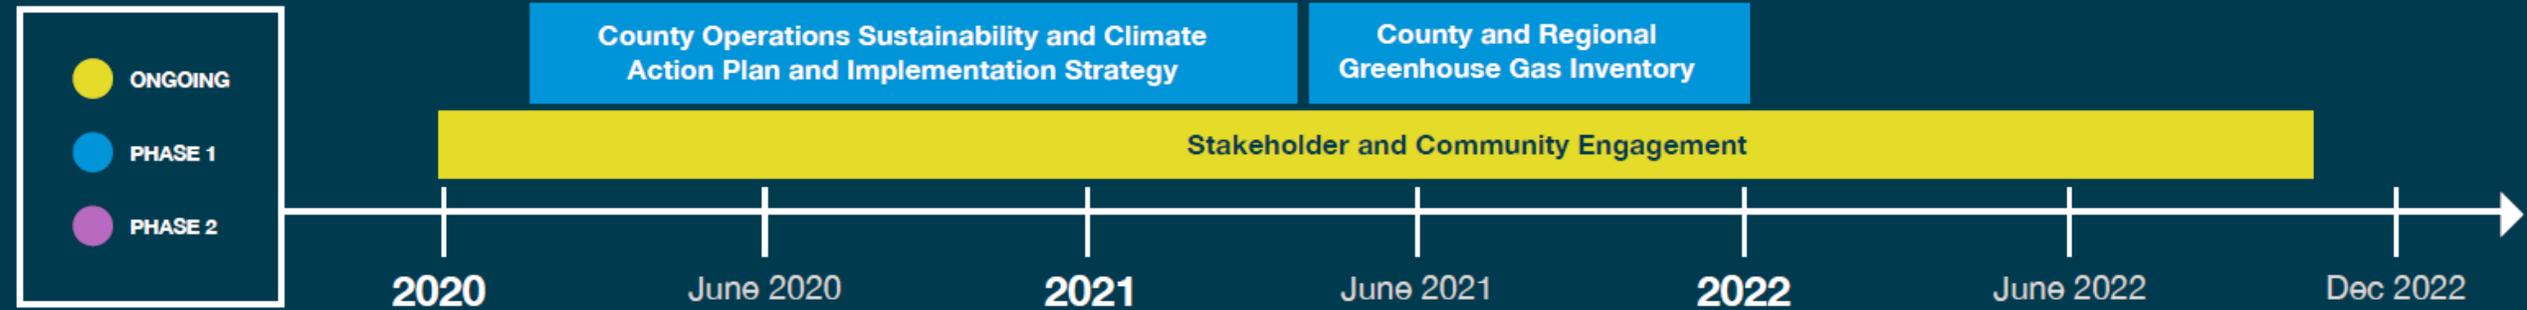

**Smart Buildings  
& Development**

Learn more about each of these areas at [allinclarkcounty.com](http://allinclarkcounty.com)

# All-In Timeline

## All-In Clark County Planning Process Timeline

# 2 WAYS CLARK COUNTY CAN ADDRESS CLIMATE CHANGE

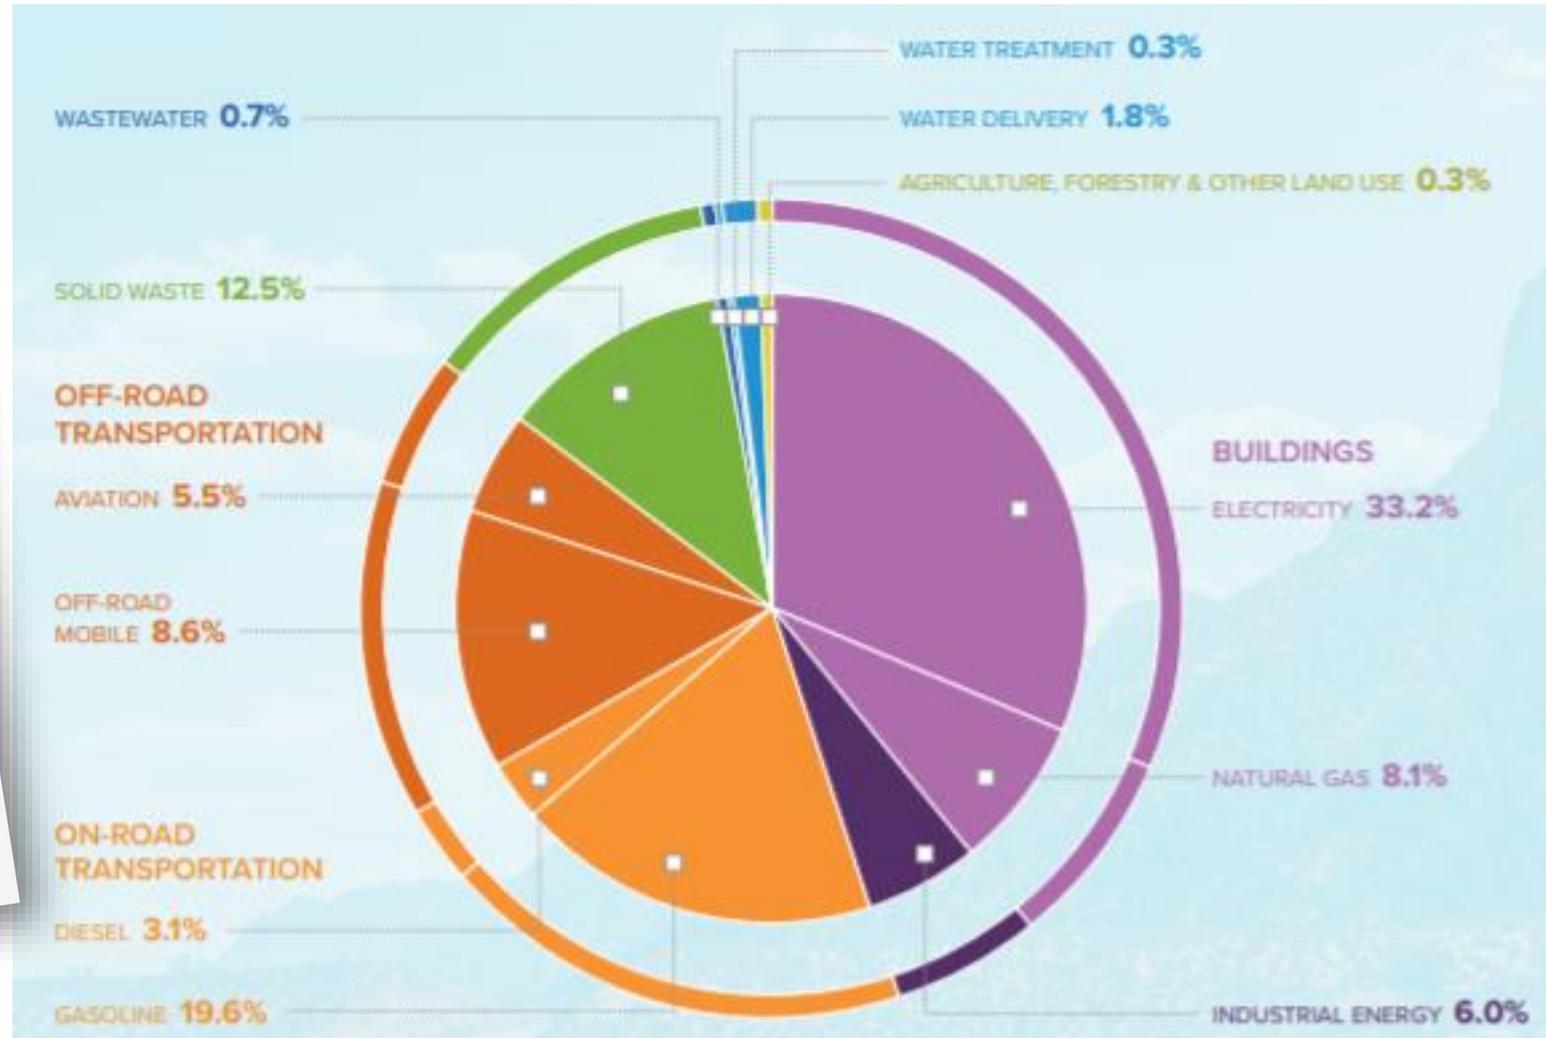

**1** Reduce greenhouse gas emissions

**2** Prepare for impacts of climate change

# Greenhouse Gas Emissions Inventory - 2019

# Clark County Emissions

50%

**BUILDINGS & ENERGY**  
15,088,500 MTCO<sub>2</sub>e

36%

**TRANSPORTATION**  
10,879,800 MTCO<sub>2</sub>e\*

12%

**SOLID WASTE**  
3,675,790 MTCO<sub>2</sub>e

2%

**WATER & WASTEWATER**  
718,750 MTCO<sub>2</sub>e

# LEADING BY EXAMPLE

# Leading By Example

Clark County passed regulations that require residential and commercial buildings to **minimize the use of dark materials and surfaces that absorb and trap heat**

Learn more about actions the County is taking at [ops.allinclarkcounty.com](https://ops.allinclarkcounty.com)

# OUR VISION

A vertical white line is positioned to the right of the text 'OUR VISION', extending from the top of the text to the bottom of the text.

An aerial photograph of a suburban neighborhood with numerous houses and trees. In the background, there are large, rugged mountains under a clear blue sky. A dark blue rectangular box is overlaid on the center of the image, containing white text.

**Preparing our community for climate-driven emergencies through strengthened natural and social systems**

# What is a 'Resilient and Healthy Community'?

- **Resources and communications** to ensure community members are prepared for emergencies
- **Protection against extreme weather** events, like flash flooding, and long-term stresses, like extreme heat
- **Management of health risks** linked to poor air quality, heat, and other climate impacts
- **Natural resources, like trees and open spaces**, that help adapt to changing climate conditions

# Examples from Other Communities

- Improve heat resilience tools and resources
- Enhance emergency preparedness and response resources
- Enhance forests and open spaces
- Incentivize the use of heat resilience strategies around homes, businesses, and public spaces
- Develop equitable green space, using drought-resistant species, in all neighborhoods

**PARTICIPATE IN  
THE PROCESS**

# Your Thoughts

# Stay Involved!

- Share your thoughts on Public Input and share with friends!
- Visit *allinclarkcounty.com*
